X·CAP
X-RAY FILM DIGITIZER

Take Your X-Ray Capture Process Digital with the New ICS X-Cap X-Ray Film Digitizer Scanning Solution.

X-Cap is designed with simplicity and ease of use in mind, it sets-up in minutes and instantly captures stunning high-resolution images of your X-Rays. Easily scan, export, and store your radiograph X-Rays images at diagnostic quality for easy submission to Claim Review Management Systems, adjudication systems, or image repositories for quick claim review.

X-Cap Is Fast!

Traditional flatbed scanners are slow and hard to use. Capturing a high-resolution image from a standard flatbed backlit scanner can take server minutes to complete. Most of the time you have to work through complicated software to optimize the image or even re-scan until you achieve an acceptable image.

Not with X-Cap. X-Cap is designed with efficiency in mind and digitizes radiograph X-Rays instantly with no moving parts or complicated software – no waiting, no rescanning. The X-Cap software makes digitizing X-Rays a simple user-friendly process, simply place your X-Ray on the scanner, crop, adjust, capture, and export! Our software can automatically export images in any number of formats and to virtually any Claim Review Management System or image repository needed for storage, such as OpenText's ApplicationXtender.

About Information Capture Solutions

Information Capture Solutions is dedicated to being a recognized leader in the Enterprise Content Management market, focusing on front end document capture input management, and automating the ways data and information are brought into the enterprise. In addition, Information Capture Solutions will also be a complete source for all aspects of consulting, systems development, document capture, information knowledge management, and web repository services for those companies that wish to solely focus on their core business functions.
